DISCLAIMER	

DONE Swap is a Decentralized Finance (DeFi) wealth management platform designed to bring simplicity to investors interested in entering the cryptocurrency and the DeFi market. DONE is equipped with the latest Bot Advisory technology to offer automated investment portfolio management enhanced through Artificial Intelligence (AI) and Machine Learning (ML). Through an intuitive user experience, DONE makes it easy for all cryptocurrency investors to achieve maximum yield optimization for their Digital Assets based on your preferences.

DONE wallet applications in the DONE Swap ecosystem are the accessible functions that you have never experienced before or you have not been able to find on the others, such as: In the blockchain finance sector, exchanges are indispensable, we have studied the entire needs of users in the crypto market and we found that the seeking demand for exchanges with centralization and decentralization applications are increasing continuously and they are similar to the e-wallets demands. However, in order to choose the right exchanges with high reliability and stable trading ability, users need to have a consistent mindset in terms of knowledge and experience. By incorporating artificial intelligence with the transaction procedure, we hope to offer the best results for the financial increase for the participants. In our roadmap development for the DONE blockchain financial ecosystem, we will build a full financial functions exchange to adapt user's demands. Introduction of Fiat-crypto conversion or vice versa that is easily processed by using the available QR code integrated in the application Exchange cryptocurrencies through bank account in many countries Create a peer-to-peer structure that is transparent You could easily manage, invest and even save deposits only on your phone.

Mission Statement

Our mission is to create wealth for cry pto currency investors by navigating the complex DeFi sector through technological development.

Our Vision

To bring greater accessibility to the DeFi sector and to be a catalyst for wealth creation and management

Token Overview

- DONE SWAP TOKEN
- BLOCKCHAIN: Binance smart chain
- TOTAL SUPPLY:
- 300 Million
- SYMBOL: DONE
 - Decimal: 9

What Is The DONE Swap Token.

DONE Swap token is a cryptocurrency that is being developed on the Binance Smart Chain (token BSC). DONE is issued by DONE swap ecosystem. The issuance of DONE is a long term plan constitutes a comprehensive ecosystem that ensures user's satisfaction such as: storage, transaction, payment, investment and utilizing financial products/services of DONE ecosystem.

DONE TOKENOMICS

- Staking 100 Million
- Ecosystem 60 Million
- Presale 60 Million
- Liquidity 40 Million
- Reserve 30 Million
- Team 9.5 Million
- Airdrop 0.5Million

Token vesting schedule

Staking: Locked for minimum 6 Months Vesting Linearly over 48 Months **Ecosystem**: Locked for minimum 6 Months Vesting Linearly over 48 Months

Presale: Not locked

Liquidity: Locked for minimum 6 Months Vesting Linearly over 48 Months **Reserve**: Locked for minimum 6 Months Vesting Linearly over 48 Months **Team**: Locked for minimum 6 Months Vesting Linearly over 48 Months

Airdrop: Not locked

PRE SALE DETAILS

- 1. Presale will take Two weeks with two phase and each phase will take one week
- 2. Phase one Cost of one taken (DONE) 0.15\$
- 3. Phase two cost of one token (DONE) 0.20\$
- 2 .Term of token sales =Two Weeks with the possibility of an automatic early completion in pursuing the final goal of presale.
- 3. Expanded goals after start presale = impossible
- 4.Total token to be locked = 240,000,000
- 6.Secured ways to purchase token = Bnb
- 7.Hardcap = 12,000,000\$

Funds usage

25% of raised funds will be used for Marketing and PR.

25% of raised funds will be used for building products and platforms.

10% of raised funds will be used for insurance funds and reserve.

15% of raised funds will be used for operation

25% of raised funds will be used for liquidity of the DONE token

USE CASE

DONE Swap Dex

DONE Swap Dex, will be a decentralized exchange that allow direct peer to peer crytocurrency transaction to take place online securely without the need for an intermediary. The unique of DONE Swap Dex Will be on the transaction fees, it will use low fees compare to other exchange during transaction and with highest speed of transactions.

DONE swap Yield Farming

Holding DONE token will help projects reduce their lock token fees and lock liquidity fees on the DONE Swap platform Millions dollars worth of Blockchain projects come out every day. Keeping their digital assets safety is important task for their team and community. With locking token - the primary feature of projects, ensuring transparency and safety in financial management of those projects. Lock Liquidity becomes a standard in the DeFi industry. We are proud to redefine this concept by bringing out this feature to the market.

Crypto Earning by Staking (or Savings) Services

DONE swap will introduce crypto earning by staking service through leading data provider for staking and crypto-growth tools which users can use their digital asset by "staking" it to secure a blockchain network. In exchange for helping to secure the network, participants who stake their coins receive a share in the block reward in the form of newly minted coins. Staking is an integral part of a Proof-of-Stake (PoS) consensus mechanism. Proof-of-Stake requires network participants to stake the network's native asset to achieve distributed consensus. Block rewards are attributed to stakers using a combination of random selection and the size of the stake (measured by the number of tokens) that have been provided. Based on the Proof-of-Work (PoW) consensus algorithm, which has been made popular by Bitcoin, DONE PoS does not require machines to make energy-intense calculations to solve a puzzle. As a result, PoS is considered a more environmentally-friendly alternative, and many consider it the future of consensus protocols.

Furthermore, Users can easily earn more crypto by DONE savings functions. The saved DONE gives users both exposure to potential assets and savings rewards with high profit.

Crypto Loan

Users can leverage crypto assets to loan DONE. We are in an effort to provide diverse financial products that you can maximize your profit, and provide win-win crypto solutions for both partners. The borrowers can mortgage their crypto assets to purchase the physical assets (like: vehicle, apartment, etc.) with a certain interest under the DONE payment gateway management.

DONE Wallet

DONE wallet- will be a digital assets wallet for cryptocurrencies. An app-based and browser extension, used to interact with smart chain Blockchain. It will allow users to send, receive, and store multiple digital assets. The app will be accessed on both IOS and Android devices with highy intuitive and user-friendly. It will secure your assets with private keys, mnemonic phrases and more.

The DONE app will initially launch as a Non-custodial wallet. With just a few clicks, you can invest in interoperable DeFi protocols like lending, borrowing, insurance, and more. Build your own investment portfolio with a hands-on approach using the app's recommendations on investment strategies or let the app automatically create a balanced portfolio based on the details you have provided.

DONE wallet Version 1

Unlike other projects where the product is launched post completion, DONE takes on the approach of rolling out the app in progressive features. The welcome wallet offers users immediate application to warm up to the platform. V1 introduces the users' wallet (non-custodial wallet), this is where all the assets are stored as well as the Liquidity Pool (LP) tokens used for yield farming. A user can buy or sell assets, send, receive, and check balances. Additionally, this is where the staking of LP tokens takes place to produce yield. Users provide liquidity to the DONE trading pairs pools via directly in the DONE ecosystem for the primary market or via Decentralized exchanges (DEX) like Uniswap and Sushiswap for secondary markets. The DEX LP stakers will receive LP tokens to be able to stake back into the DONE wallet that act as receipts. In this phase the DONE referral program is also introduced.

Done wallet Version 2

In V2, the 'Smart Wealth Management' features are introduced. The user is asked to define their risk profile by specifying their ideal investment period, state their knowledge, experience, loss tolerance and their financial confidence over the period of 12 months. This will help the system to get to know the users' profile to suggest different investment portfolio options. Staying ahead of the curve is difficult in the DeFi markets but it's made easier with DONE recommendations. These are predetermined strategies with specific

characteristics and will be suggested by the app based on the user's risk profile. Users can rebalance their allocation to each portfolio using an intuitive User Interface (UI) designed

for simplicity. With DONE, it becomes much easier and cheaper to have well balanced portfolios based on proven strategies

Vision & Mission of DONE Wallet

Vision: Being a leading digital bank in crypto market

Mission: A global crypto-finance hub, which provides financial products/services for millions of users worldwide.

Core value: Security, Unlimited of space and time, Authentic experience and Convenience.

Features of DONE Swap Wallet

Crypto Wallet With the basic functions such as storage, withdrawal, deposit, and swapping between crypto and crypto-fiats-crypto. The DONE team aims to build safe and seamless crypto wallets for communities in which they can purchase physical products in real life by crypto. To boost convenience and liquidity, DONE also provides peer-to-peer crypto-fiat trading features, which allow users to trade any cryptocurrency listed on our exchange for fiat with other users within the DONE network. For added security, the DONE Swap wallet will keep the crypto in escrow while the buyer transfers the fiat directly to the seller. We believe that this function will be very helpful in lowering the entry barrier of traditional equity investors to crypto/ICO investments. This allows global market access with local trading for crypto traders. Currently, the bank accounts of the buyer and seller must be within the same country (i.e. trades are limited to domestic money transfers) to ensure ease of trading with respect to speed and convenience, as well as customer support. We are also exploring the possibility of cross-border transfers in the near future. During the peer-to-peer trading process, we will allow the buyer and seller to communicate directly with each other via our messaging system. The contents of the communications and the trade contract created by both seller and buyer will be archived in case of potential disputes. When a dispute arises, our customer service team will step in to assist the disputing parties.

Done Trading Bot

DONE Bot does the thinking for the user. The bot learns your investment profile and preference through a preliminary profiling questionnaire. Based on your inputs, the bot runs an algorithm on the Smart Engine to assess your investment risk appetite level. Based on

you risk appetite, a risk matching is done to the available Digital Assets for investments to generate a personalized investment portfolio recommendation. The process is simple, fast, and efficient. And the result aims to provide accuracy and transparency to the investor in context to his investment objectives.

A Done Trading Bot is a digital platform that enables automatic financial planning services with little to no human interaction. These systems are driven by highly complex algorithms and data given by the client. A typical Bot-advisor collects information from clients about their financial situation and future goals and then uses the data to offer advice and automatically invests on behalf of their clients

Done swap brings Trading Bot on cryptocurrencies and DeFi protocols. The app relies on advanced algorithms and AI models to provide trade signals, suggestions to formulate investment strategies, complete portfolio set up and management based on parameters set by the user. DONE is bringing Artificial Intelligence (AI) to the blockchain. The app relies on algorithms and AI models to optimize Return on Investments (ROI) of DeFi assets and products. The DONE smart engine matches various income returns vs risk parameters to provide investors with recommendations on formulated investment strategies and portfolio options.

DONE CASH

It will be a platform that will be launched for the sale of a wide range of products using the payment of Done Swap Token currency

Done swap token will introduce electronic commerce to allow community to have access of buying and selling goods or services through Business to Business (B2B), Business to customer (B2C), Customer to Customer (C2C), Customer to Business (C2B). That means Done swap Token will link those groups via Done Cash

Our major aim was to minimize cost and provide efficient product and service at a right time in such a way to reduce the cost of create process, distribute, retrieve and manage the paper based information by digitizing the information.

Done swap token members will enjoy the benefits and commission obtained from this part of project soon after launched.

Why should you choose Done Cash?

With the increasing use of the Internet and its popularity among all segments of the population, e-commerce is the way to go for almost all businesses. Creating online presence means that the business owner or company can reach potential customers and expand business operations, gaining the necessary authority in the market. It is almost impossible for a company to compete in a highly competitive business world if it does not have a strong online presence, which is the essence of e business. Various and large companies

have used ecommerce to boost sales by listing their services and products online, where users can view and query, as well as order orders at the click of a computer button. Blockchain is partially defined as the future of global finance. Digital asset payments will certainly be the future of global payments. Blockchain is creating a payment revolution, modernizing the payment system by new payment methods creation combined with old

platforms inheritance, payments with digital assets on blockchain, unlocking the new world with faster, more secure and more decentralized features. The exponential increase in the use of cryptocurrency over the past few years is explained by a very compelling reason that it has disrupted the traditional financial regulatory systems by making money sending and receiving as easy as sending and receiving an email. Cryptocurrency adoption expands business sales opportunities into international markets where international payments are hindered by geography, while reducing costs through lower payment costs and increased transparent calculation and payment efficiency. Every day companies that do business internationally and send billions of dollars abroad incur high fees and delays of up to a few weeks that directly affect their business. The Crypto market has broken the \$1 trillion cap and tops \$2 trillion, but with current demand, the market cap will certainly increase dramatically. We will have an opportunity to see people's interest in this market in the near future. That is a strong impetus for the development of crypto payment financial ecosystems. Blockchain technology has developed to a remarkable level that is no longer as primitive as when it was first born, previously blockchain networks were slow to synchronized, authenticate, not highly networks operated independently, communication between different blockchain networks is not possible. A few years ago, scaling a blockchain network was difficult due to the narrow nature of the blockchain principle. However, now things have changed, blockchain can talk to each other, transform and expand whenever the needs of the user need it. The revolution of Fintech on Blockchain with new models and approaches, closer to daily life has caused the attention of society to focus on this industry. The emergence of financial funds and economic institutions in the market shows that the payment market, Blockchain-related investment and digital assets are increasingly popular in daily life.

DONE SWAP Roadmap

2021

Q4-

- -Smart contract creation and presale
- -Web development and smart contract deployment
- -Locking
- -Done Swap token listing Cex Exchange
- -Done coinmarketcap and coingecko listing
- -Done Whitepaper

2022

Q1

-Done Swap dex launch

$\mathbf{Q2}$

- Done swap Yield Farming

Q3

-Done Wallet launch

Q4

- Done Cash and testnet launch

2023

Q1

Done mainnet launch
